

Fuse Turret

total

Better user control

New software capability - Traders able to program all buttons as needed. "At the position" control of line labels, alarms, per line privacy, per line position and more. Call control area allows single key access to see, manage and access call history.

Easier collaboration

Line status available at desk, group or floor level at any time. Status pages show held missed or busy calls at desk, group or floor levels. Single touch barge in, intercom or broadcast from any position.

More powerful

2100+ line capacity, full 'instant -on' free-seating. Hands-free and control of 5 dynamic speaker channels as standard.

Like a Touchscreen? – *Fuse* Prefer Keys? – *Fuse*

Fuse combines *both* capabilities into one Turret

- **Intuitive user interface with clear color-coded line status to enable easier access and control**
- **Deployable on-site, in-cloud or remotely with off the shelf hardware.**
- **Linux based operating system with full IP connectivity ensures maximum reliability and connectivity.**
- **Recording capability as standard – web based playback.**

enepath Fuse Turret is designed to make life easier for the Trader. As simple as that.

Maximum reliability, maximum flexibility, maximum capability all delivered with minimum Trader effort. **Fuse** delivers capabilities over and above what the market has come to expect. Speakers and recording as standard, downloadable applications included, call information and call history at the touch of a button, collaboration at any position all delivered in a solution that increases ROI to every Trader.

Fuse is available with a full set of function keys and line keys allocable by the user. Each line key delivers information on counterparty, number and call activity. Trader is able to log on and off at any position and extend calls to other phones or mobiles. Trader is able to intercom to any party or group and uses any hoot channel as allocated to the system.

Fuse Turret

The *Fuse* Turret is designed to be the most powerful and most capable on the market today. Every function is able to be completed with fewer key presses than with any other comparable system and at higher speed.

A powerful PC based processor is at the heart of the Linux-based Turret and gives a Trader new price performance levels.

This means capabilities are included as standard, often without the need and cost of external solutions. Voice recording, call history management and timed linking to other systems are all part of our capability.
