

Tablet - the new face of Turrets

Delivering compliance, mobility and business continuity, with the minimum of trader effort.

en:opath

The Tablet represents the next step for Traders and IT departments alike. A Turret with all the functionality a Trader expects and more.

For the first time, you can use the Turret anywhere, any time, at full capacity. Taking up less space, using less power and easily integrated into the workflow. With recording as standard, the Tablet is fully compliant, always secure and delivered over a managed network.

The ability to deliver a full business continuity solution just got easier. Using the en:opath Adaptive Media Platform (AMP), an enterprise can simply take Tablets to a site, connect and be working in minutes. It is now possible for each individual Trader to have their own backup solution - by supplying another Tablet.

Making a difference to the way Traders work

**A seamless Trader voice solution
for any business - from Startup to Global Enterprise**

Tablet - the new face of Turrets
